

SHOP CONNECT VIEW!

CASE STUDY

Paul Transportation, Tulsa, OK, was looking for maintenance and asset management software to gain visibility into key fleet and technician performance metrics. They wanted a system to reduce operating cost, track warranties and assist in warranty tracking and recovery.

“ Before, our managers were doing a lot of repetitive work. With Shop Connect VIEW they can do other things to assist with the business!

Shop Connect VIEW takes a lot of the guesswork and potential error out of the equation because it is tracking things automatically. It takes a ton of time out of the equation!

Richard Owens,
Director of Maintenance
Paul Transportation
